

Welcome to your Technical Fix recommendations. Please take a moment to review these instructions before reviewing the document.

Each issue has it's own tab, please see below for an explanation of each problem and what we need from you in order to proceed:

Issue	Explanation	Action Required
Orphan pages	Pages With No Incoming Internal Links Search engine crawlers can only discover such pages from the sitemap or from external backlinks, and may take a longer time to index these pages. Each important page on your website should have at least one link going to it from any relevant page on your website.	SEOSpace: We will add internal links to these pages if applicable. The client needs to confirm some actions.
External 301 Redirects	Links that go to external resources or websites which are being redirected to another destination.	SEOSpace: We will replace the redirected URLs with the final destination. No client action required.
Multiple H1	Pages That Have More Than One <h1> (Heading 1) tag. There should be only one <h1> per blog/page.	SEOSpace: We will remove the additional H1s if applicable. No client action required.
Missing H1	Pages With No <h1> (Heading 1) Tag. One <h1> per blog/page is recommended.	We have made a recommendation of the suggested H1. Client to confirm whether they are happy for the H1 to be added or if there are design implications, please instruct your developer to make the changes. The client should approve this (by marking the checkbox) or provide their own edited version in the following column (column E).
Meta Description Too Long	Meta description should be between 150 to 160 characters. If Google decides to use the page meta description as a snippet in the SERP, the longer meta description may get truncated.	We have made a recommendation of what the meta description should be. The client should approve this (by marking the checkbox) or provide their own edited version in the following column (column H).
Meta Description Too Short	Meta descriptions that are smaller than 150 characters. A short meta description may not summarize the content of your page in the best possible way.	We have made a recommendation of what the meta description should be. The client should approve this (by marking the checkbox) or provide their own edited version in the following column (column H).
Title Too Long	Titles Longer Than 60 Characters Title length should be between 50 and 60 characters. Longer titles that are more than 60 characters will be truncated when they show up in the search results. Generally recommended title length is between 50 and 60 characters.	We have made a recommendation of what the page title should be. The client should approve this (by marking the checkbox) or provide their own edited version in the following column (column G).
Missing Alt Text	Images Without an Alt Text The alt text is used to describe your image. Search engines will use it to understand the content of your image files. Also, this text will be shown on your page if the image cannot be displayed.	SEOSpace: We will add alt text where there is none. No client action required.
Image Too Large	Images that are larger than 250Kb impact the page loading speed.	SEOSpace: We will compress the images, retaining their quality, and reupload them to the site. No client action required.

Technical SEO Checklist

Done?

Updated Robots.txt Rules	<input type="checkbox"/>
Fixed HTTPS/SSL Issue	<input type="checkbox"/>
Fixed 404 Error Pages	<input type="checkbox"/>
Activated Akismet Plugin	<input type="checkbox"/>
Activated Wordfence Plugin	<input type="checkbox"/>
